DISCUSSION NOTES:

- **Images:** The drawn images look fantastic. We discussed stretching the background image and applying filters in Photoshop to make it recede into the background. This will also work to limit contrast issues.
- **Information & Font:** As was mentioned in class, we discussed needing to increase font sizes, and shorten some of the wording
- **Navigation:** We went through using JavaScript to identify div elements and apply navigation functions.
- **Final Touches:** If JavaScript is easy to use, we discussed potentially having images pull up larger-scale overlay versions when clicked.
